

Anti-Ransomware as a Service for Managed Services

Automated Moving Target Defense (AMTD) and Adaptive Exposure Management from Morphisec offer continuous protection against sophisticated threats, enhanced operational efficiency and reduced total cost of ownership for managed service providers (MSPs). Revolutionize your managed services portfolio with comprehensive and prevention-first capabilities that enable a comprehensive, proactive approach to cybersecurity.

Adaptive Exposure Management

Infiltration protection

Impact protection

Adaptive Exposure Management

Prioritize vulnerabilities, automate the assessment of security controls, identify high-risk software and address security misconfigurations.

Automated Moving Target Defense

Stop ransomware, supply chain attacks, zero-days, fileless and other undetectable attacks in-memory at runtime with Morphisec's pioneering technology.

Infiltration Protection

Prevent ransomware early with AMTD and make it harder for attackers to exploit vulnerabilities within an attack surface that's always shifting.

Impact Protection

Safeguard your systems when ransomware attempts to execute by protecting critical assets and files, minimizing recovery times and fortifying your overall ransomware stance.

Get Greater Visibility And Optimize Security Operations With Morphisec For Managed Services

Traditional tools and strategies center on a reactive approach to threat management and mitigation with threat intelligence informing defense mechanisms like signatures, heuristics, behavior analysis and indicators of attack (IOAs) and indicators of compromise (IOCs). For most managed services teams, increasing vulnerability volumes, untimely threat intelligence and telemetry overload is complicating threat response.

Powered by AMTD, Adaptive Exposure Management from Morphisec offers multi-layered capabilities and greater visibility for threat identification and remediation.

Elevate your services portfolio

Access expertise you can trust

Enjoy comprehensive support

Benefit from a bespoke, client-centric approach

Benefits

Assurance: Gain peace of mind with continuous protection that ensures uninterrupted cybersecurity defense and delivers comprehensive coverage against a wide range of threats, including those that are undetectable by traditional security solutions.

Total Cost of Ownership (TCO): Reduce the need for additional staffing and minimize financial impact by preventing threats early. Morphisec's ultra-lightweight agent ensures negligible performance impact that requires minimal maintenance.

Enhanced Visibility: Enjoy continuous monitoring that provides real-time visibility into vulnerabilities, shadow IT, and high-risk software. Risk-based prioritization helps to identify and address the most critical security issues.

Defense-in-Depth: Enhance existing security measures with an additional preventive layer that significantly lowers the number of false positives, reducing analyst fatigue and improving response times.

Improved Cybersecurity Posture: Boost audit scores, support compliance initiatives, and potentially reduce cyber insurance premiums. Proactive security measures additionally eliminate attack dwell time and support recovery efforts.

Operational Readiness: Enhance team performance by freeing up resources for critical tasks and minimizing routine patching requirements. System hardening and virtual patching free up resources, allowing teams to concentrate on critical tasks instead of routine patching.

Professional Services: Get up and running quickly with the support your team needs including a dedicated concierge to ensure optimal performance and benefit maximization, and expert threat mitigation and incident response support to minimize costs and advise on prevention strategies.

“By embedding AMTD into our existing endpoint security solution, we can deliver a fully optimized endpoint security solution and better protect our customers against sophisticated threats.”

About Morphisec

Founded in 2014, Morphisec, a pioneer in blast radius resiliency, keeps your business safe by intelligently anticipating and neutralizing threats - minimizing the impact and blast radius of cyber incidents and ensuring uninterrupted business operations without the need for constant tech team intervention or impact to performance.

Powered by Automated Moving Target Defense (AMTD) technology, the next evolution of cybersecurity, Morphisec protects over 7,000 organizations across nine million Windows and Linux endpoints, servers and workloads. Morphisec stops thousands of advanced attacks daily at Lenovo/Motorola, TruGreen, Cipla, Citizens Medical Center, and many more. Learn more at www.morphisec.com
