

Morphisec + EDR = Better Together

Fortify your Endpoint Security Stack with Preemptive Cyber Defense

Endpoint Detection and Response (EDR) solutions struggle to provide sufficient protection against sophisticated attacks. Traditional solutions focus on detection and response after an attack has already begun, leaving gaps when defending against ransomware attacks, zero-day threats, fileless malware, and memory-based exploits.

What Sets Morphisec Apart?

Powered by Morphisec's patented Automated Moving Target Defense (AMTD) technology, the Anti-Ransomware Assurance Suite offers true protection without prior knowledge. It provides a preemptive approach that stops the execution of threats without relying on analysis-based reactive detection. For teams actively using EDR solutions, Morphisec takes capabilities to the next level by adding an essential security layer for comprehensive ransomware defense.

Fortify Endpoints in the Cybersecurity Maze

Transform the treacherous maze of cyber threats into a secure fortress, stopping attackers dead in their tracks and protecting your critical assets with Morphisec's leading defense-in-depth strategies.

Prevent Attackers from Reaching Critical Assets

Morphisec's endpoint security technology acts as a formidable barrier in the cybersecurity maze, effectively stopping attackers before they can infiltrate and impact your critical assets.

Protect Endpoints Against Ransomware

Proactively block ransomware attacks before they can execute. As both a safety net and a complement to EDR, Morphisec ensures endpoints are protected from even the most evasive ransomware tactics.

Morphisec + EDR = Better Together

Enhance the capabilities of the EDR and XDR tools you use today

Behavior Detection

Encryption Prevention

Data Recovery

Early Execution Prevention

Hunting and Response

Morphisec Fortifies EDR

The Morphisec Difference

Morphisec works with any EDR, filling existing security gaps, stopping the unknown attacks that bypass your existing security stack, and strengthening the last mile of defense with the highest level of anti-ransomware assurance available.

Behavior Detection – Unlike EDRs, which rely on detection of patterns or previously observed threats, Morphisec prevents ransomware before it executes, by altering each endpoint's attack surface, providing prevention against fileless threats that EDR solutions are ineffective against.

Encryption Prevention – Morphisec is the **only cybersecurity company** to hold a patent on ransomware prevention using decoys, ensuring unmatched protection against encryption-based attacks.

Data Recovery – Critical assets and files are safeguarded if ransomware attempts to execute, minimizing recovery times and fortifying your organization's anti-ransomware stance.

Early Execution Prevention – Prevent attacks early with Morphisec's pioneering AMTD technology that dynamically reshapes the attack surface on the endpoint, making the endpoints and critical assets unpredictable and inaccessible to attackers.

Rest Easy with Morphisec's Ransomware-Free Guarantee

Morphisec takes accountability to the next level with its Ransomware-Free Guarantee:

100% Money Back Guarantee

Full reimbursement of subscription fees if a ransomware breach occurs.

Expert Incident Support

Comprehensive investigation and response services to contain and remediate the attack.

Ransomware attacks are increasing in scale and sophistication, and reactive solutions are no longer enough. Morphisec's **prevention-first approach** delivers the confidence and resilience businesses need to operate securely in today's threat landscape.
